Notes

TD-1 Tube Overdrive Pedal

A reissue of an 80s classic. Nady was one of the first to get a tube loaded overdrive pre-amp pedal on the market.

True bypass. Isolates the pedal from you signal once it has been turned off. (very important for the tone hounds), so your sound is totally clean and unaffected when not in use.

Lockable power supply - No kicking the power supply out during live performances

Massively adjustable EQ section from mid boost for Gary Moore emotive solo playing to mid scooped Dime Bag riffage. With low, high mid and presence adjusting. So I would say from British to American and all in between.

Adjustable Gain low just broken clean to full on distortion frenzy.

12AX7 Pre amp tube. Gives you a smoother more natural sound, very musical.

Solid Sturdy construction for a lifetime of gigging.

ND TD-1 - RRP £124.95
